DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-27, drawn to a drive system, classified in class 290, subclass 40C.
 - II. Claims 28-30, drawn to a control method for a drive system, classified in class 322, subclass 28.
 - III. Claims 31-34, drawn to a control method for a traction drive system, classified in class 180, subclass 15.
 - IV. Claims 35-38, drawn to a tractor, classified in class 56, subclass 16.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the control method can be used for hybrid vehicles wherein the devices have a first and second motor. Also, a drive system for a mower does not require a system to measure the currents of the motors (claim 29) nor a drop in motor current (claim 28).

3. Inventions II and III are related as combination and subcombination.

Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because equalizing the speed of the two motors regardless of the loss of traction is not required by invention II or for a particular drive system. The subcombination has separate utility such as control drive system use in airplanes wherein the turbines' current are compared and detected. Moreover, the speed of the turbines can be detected.

4. Inventions I and IV are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because a computerized control system is not required in a lawn tractor (claim 10). Moreover, the use of a gear box is optional in a mower (claim 8). The subcombination has separate utility such as a lawn tractor that can be used for carrying heavy loads in a farm (claim 37). A mower can be used for gardening purposes in houses (claim 1).

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper and because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
